Waterless Trap for your RV plumbing system. Make foul smelling odors a thing of the past.

For further details visit: www.hepvo.com

Actually, it is rocket science! A U.S. company has developed the space-age solution to keep your RV interior dry and fresh. With a rugged yet classy design, the H2Out® Space Dryers use a desiccant developed by NASA. This proven technology will prevent water condensation and contamination, eliminating corrosion, rust, mold, mildew, dampness and odors. Not messy, corrosive and toxic like other products. The H2Out® Space Dryer has many more applications and works while your RV or Trailer is in motion as well as stationary.

A renewable element means that it will last through hundreds of renewals. No mess to clean up, no hazardous waste to dispose. Place the Space Dryers in your interior to keep it dry . . . RV's, Trailers, Trucks, Cargo holds, lockers, gun-safes, tool boxes, even freezers to prevent frost build up. Virtually any enclosed space can be protected. H2Out® Space Dryers come in a variety of sizes to meet any need.

When the H2Out® Space Dryer is new and dry, the interior desiccant is a cobalt blue color. The H2Out® Space Dryer will adsorb water molecules from the air, gathering the moisture and bonding to it. In time, this material will turn a pale pink color that indicates it is working. To reactivate your Space Dryer simply place the H2Out® metal element in the oven for 2 hours at 325 degrees F (160 degrees C). The pink will disappear and turn dark blue again, ready for re-use.

You can download the H2Out Space Dryer RV Brochure here.

You can find H2Out on Amazon.com or at the H2Out Systems website.
